[Click here for details.](#)

**UBS provides a complete service for the specification, supply and installation of a range of high capacity personnel and material hoists for all forms of construction where access is required**

**UBS Aluminium Hoist Common Towers allow comprehensive hoisting facilities to be installed on new build and renovation projects with minimum interference to the construction programme.** Hoists of all types can be tied to and grouped around the Common Tower structures. The use of Common Towers maximises the capability for increased access whilst minimising the quantity and size of openings into the building.

The towers can be installed up to a working height of 300m with cantilevered run backs and platforms into the building under construction.

With the wealth of technical knowledge gained from high rise projects such as the **Canary Wharf** development, Skanska Swiss Re [Gherkin] Tower, Multiplex West India Quay, Carillion Manchester Beetham Tower, Ballymore Ontario Tower and Pan Peninsula Towers, Bovis Bishopsgate Tower and many others, UBS is uniquely placed to provide access solutions and specialised hoisting equipment.

UBS prides itself in being able to offer an imaginative solution and not turn our backs because it could not be solved using standard equipment.

A problem can always be solved.
